

Rate Recording

Student Name: _____ Week of: _____ Setting: _____ Observer: _____

Instructions:

Mark with a tally each time the target behavior occurs during the given time period. When the time period is over, calculate the rate using the formula below.

Target Behavior *(insert target behavior from FACTS Part A, Step 3):*

Week of:	Start Time (t)	End Time (t)	Tally when the behavior occurs (n)	Calculate Rate (n/t)
<i>Example</i>	10:00 AM	10:15 AM		20 times in 15 minutes or 1.33 times per minute
Monday				
Tuesday				
Wednesday				
Thursday				
Friday				

Formula for Rate: $r = (n/t)$ number of occurrences over time
